

KeraLine in practice

Versatility included

KeraLine elements are suitable for the lining of all accessible constructions of the city drainage systems, in particular for conduits of all shapes, e.g. circular-, oval-, egg shaped-, rectangular or other cross-sections.

Beside of its use in rehabilitation projects, KeraLine elements are also applied in new constructions as an internal corrosion protection to large diameter steel reinforced concrete pipes.

Furthermore the surfaces in manholes, or the flooring in e.g. fruit-, or milk processing plants, breweries etc. are made resistant against acids with KeraLine.

KeraLine in short

- for rehabilitation
- for new constructions
- individual cross-sections
- longevity
- water tight
- permits vapor diffusion
- resistant to high pressure cleaning
- high resistance to abrasion
- simple repair procedure
- little construction depth
- large elements
- easy adaptation to curvatures
- instantly accessible
- over-head installations
- no washing out
